

Mercedes-Benz

A breath of fresh air.

Air conditioning revitalisation.

The only friendly life in your Van should have only two legs and when it comes to air conditioning there is no such thing as friendly bacteria.

#### Did you know that?

- Bacterial growth in your air conditioning can cause bad smells, poor air quality and a whole range of potential allergens that could damage your health or the health of your staff.
- Air conditioning should be left switched on all year round to reduce the chances of unpleasant odours and to maintain the operating efficiency of the system.
- Ineffective air conditioning in your vehicle can reduce visibility (a major contributor to road accidents) due to high humidity.
- Ineffective air conditioning increase the chances of driver fatigue due to increased physical strain on the body.
- The result of driver fatigue due to poor air conditioning can have as much effect on driver responses as the consumption of alcohol.
- Driver fatigue is one of the largest causes of accidents on the road.
- Badly operating air conditioning increases fuel consumption.
- Vehicle air conditioning should be serviced every two to four years dependant on mileage to protect the driver and the vehicle.

**Air Conditioning Service only £ 35.00 +VAT**
